1. Universes

Universes are semantic layers that map complex database structures into user-friendly, business-oriented terms. They act as a bridge between raw data and end-users.

2. Web Intelligence (WebI)

A powerful reporting tool that allows users to create, modify, and analyze reports directly within a web browser.

3. Crystal Reports

Used for designing highly formatted, pixel-perfect reports suitable for operational reporting.

4. Dashboards and Xcelsius

Tools for creating interactive dashboards that visualize data in real-time.

5. Central Management Console (CMC)

The administrative interface for managing user privileges, scheduling reports, and configuring the system.
