- Record initial water levels.
- Start the timer and note the water level at regular intervals (e.g., every 30 minutes).
- Observe how factors like temperature and surface area influence the rate of evaporation.

Expected Outcome

An increase in temperature or surface area typically leads to a higher rate of evaporation, demonstrating the effect of these variables.

2. Measurement of the Acceleration Due to Gravity Using a Pendulum

To determine the acceleration due to gravity (g) using a simple pendulum.

Materials Required

- String (about 1-2 meters)
- Rigid support stand or hook
- Small dense object (bob) like a metal washer

Procedure

- Attach the bob to one end of the string and suspend it from the support stand.
- Measure the length (L) of the pendulum from the point of suspension to the center of the bob.
- Pull the pendulum back to a small angle (less than 15°) and release without pushing.
- Use the stopwatch to measure the time (T) for 20 oscillations.
- Calculate the period (T?) of one oscillation: $T? = T / 20$.
- Use the formula: $g = (4\pi^2 L) / T^2$ to compute the acceleration due to gravity.

Notes

Ensure the angle of displacement is small for accurate results and repeat the experiment for consistency.

3. Exploring Ohm's Law through Electrical Circuits

Objective
