Problem 1: Find the Measure of an Inscribed Angle

Question: In a circle, an inscribed angle intercepts an arc measuring 120° . What is the measure of the inscribed angle?

Solution:

- Recall that the measure of an inscribed angle is half the measure of its intercepted arc.
- Therefore, inscribed angle = $\frac{1}{2} \times 120^\circ = 60^\circ$.

Answer: 60°

Problem 2: Calculate the Length of a Segment Using Secants

Question: Two secants intersect outside a circle. One secant has a segment outside the circle measuring 3 units, and the entire secant (outside plus inside the circle) measures 8 units. The other secant outside measures 5 units, with the entire secant length being 12 units. Find the length of the segments inside the circle for both secants.

Solution:

- Use the secant segment product property: Outside segment $\times$ entire secant length = product for the other secant.
- For the first secant:
 - Outside segment = 3 units
 - Entire secant = 8 units
 - Inside segment = $8 - 3 = 5$ units
- For the second secant:
 - Outside segment = 5 units
 - Entire secant = 12 units
 - Inside segment = $12 - 5 = 7$ units

Answer: Inside segments measure 5 units and 7 units, respectively.
