Example of a Typical "if2508" Problem and Its Solution Approach

While specific weekly problems vary, here's an example inspired by common themes in sixth-grade math challenges:

Problem:

Sara has 48 apples. She wants to pack them equally into baskets. If she uses 8 baskets, how many

apples will go into each basket? If she decides to use 12 baskets instead, how many apples will go into each basket? Are the total apples packed the same in both cases? Explain.

Solution Approach:

Step 1:

Identify what is asked:

- Number of apples per basket in two scenarios
- Whether total packed apples are the same

Step 2:

Calculate apples per basket for each scenario:

- Scenario 1: 8 baskets

Apples per basket = $48 \div 8 = 6$ apples

- Scenario 2: 12 baskets

Apples per basket = $48 \div 12 = 4$ apples

Step 3:

Compare total apples packed:

- Both cases involve packing all 48 apples, so total packed in both cases is the same (48 apples).

Step 4:

Conclusion:

- The number of apples per basket decreases as the number of baskets increases.
- The total number of apples remains constant at 48.

Additional insight:

This problem illustrates the inverse relationship between the number of baskets and apples per basket, reinforcing understanding of division, proportionality, and total quantity.
